

A genomic track visualization showing TE consensus across the human genome. The x-axis is labeled 'TE consensus (bp)' and ranges from 0 to 20,000. The y-axis represents the density of TE consensus. The track displays a dense, dark horizontal band across the entire genome, indicating a high density of TE consensus. A prominent red horizontal line is visible near the bottom of the track, likely representing a specific TE element or a threshold. The track is composed of many small, overlapping horizontal segments, creating a textured appearance.
