

The graph displays the relationship between TE consensus length (x-axis, 0 to 6000 bp) and coverage (y-axis, 10 to 60 bp). The coverage is highest at a TE consensus length of approximately 1000 bp, where it reaches a peak of about 65 bp. There are also smaller peaks around 500 bp and 7000 bp. The coverage is generally low (around 5-10 bp) for most of the TE consensus range.
